## TIPS FOR TENANTS WHO OWN AN EV

- 1** Many landlords are open to invest in their property, keeping it comfortable and technically up-to-date. **Just ask if he or she would allow you to install a wallbox.** In many European countries there are subsidies.
- 2** **Rent a parking space in an underground car park near you.** Instead of making your rounds in the neighbourhood day after day in search of a parking space, you simply head for the home base of your smart #1 and smart #3.
- 3** **Create your own infrastructure.** Many cities, municipalities or charging infrastructure providers offer the possibility to suggest a location for a new public charging station.
